many different topics for use in one or more courses. The highly readable writing style and mathematical clarity of the first edition are continued in this edition. Major revisions in this edition include: an expanded coverage of three-dimensional stress/strain transformations; additional topics from the theory of elasticity; examples and problems which test the mastery of the prerequisite elementary topics; clarified and additional topics from advanced mechanics of materials; new sections on fracture mechanics and structural stability; a completely rewritten chapter on the finite element method; a

new chapter on finite element modeling techniques employed in practice when using commercial FEM software; and a significant increase in the number of end of chapter exercise problems some of which are oriented towards computer applications. The State of the African Cities 2010 goes above and beyond the first report, which provided a general overview of housing and urban management issues in Africa. With the subtitle: Governance, inequity and urban land markets, the report uncovers critical urban issues and challenges in African cities, using social and urban geography as the overall entry points. While examining

poverty, slum incidence and governance, the report sheds more light on inequity in African cities, and in this respect follows the main theme of the global State of the World's Cities 2010 report. Through a regional analysis, the report delves deeper into the main urban challenges facing African cities, while provoking dialogue and discussion on the role of African cities in improving national, regional and local economies through sustainable and equitable development. The report has been drafted in cooperation with Urban Land Mark. Through an analytical survey of several African cities, the report examines urban

growth, social conditions in slums, environmental and energy issues and, especially, the role of urban land markets in accessing land and housing.
