Over 5,300 total pages MARINE RECON Reconnaissance units are the commander's eyes and ears on the battlefield. They are task organized as a highly trained six man team capable of conducting specific missions

behind enemy lines. Employed as part of the Marine Air-Ground Task Force, reconnaissance teams provide timely information to the supported commander to shape and influence the battlefield. The varying types of missions a Reconnaissance team conduct depends on how deep in the battle space they are operating. Division Reconnaissance units support the close and distant battlespace, while Force Reconnaissance units conduct deep reconnaissance in support of a landing force. Common missions include, but are not limited to: Plan, coordinate, and conduct amphibious-ground reconnaissance and surveillance to observe, identify, and report enemy activity, and collect other information of military significance. Conduct specialized surveying to include: underwater reconnaissance and/or demolitions, beach permeability and topography, routes, bridges, structures, urban/rural areas, helicopter landing zones (LZ), parachute drop zones (DZ), aircraft forward operating sites, and mechanized reconnaissance missions. When properly task organized with other forces, equipment or personnel, assist in specialized engineer, radio, and other special reconnaissance missions. Infiltrate mission areas by necessary means to include: surface, subsurface and airborne operations. Conduct Initial Terminal Guidance (ITG) for helicopters, landing craft, parachutists, air-delivery, and re-supply. Designate and engage selected targets with organic weapons and force fires to support battlespace shaping. This includes designation and terminal guidance of precision-guided munitions. Conduct post-strike reconnaissance to determine and report battle damage assessment on a specified target or area. Conduct limited scale raids and ambushes. In 2004, an audit identified a set of key protection practices that include: allocating resources using risk management, leveraging technology, information sharing and coordination, performance measurement and testing, and strategic management of human capital. This report determined whether the NPS's security efforts for national icons and parks reflected key practices. Includes recommendations. Charts and tables. Says the author "This book... is not written for the members of fringe political groups, such as the Weatherman, or The Minutemen. Those radical groups don't need this book. They already know everything that's in here. If the real people of America, the silent majority, are going to survive, they must educate themselves. That is the purpose of this book." In what the author considers a survival guide, there is explicit information on the uses and effects of drugs, ranging from pot to heroin to peanuts. There is detailed advice concerning electronics, sabotage, and surveillance, with data on everything from bugs to scramblers. There is a comprehensive chapter on natural, non-lethal, and lethal weapons, running the gamut from cattle prods to sub-machine guns to bows and arrows. How do you begin to understand the concept of nothing? Where does it begin and where does it end? From the zeros of the mathematician to the void of the philosophers, from Shakespeare to the empty set, from the ether to the quantum vacuum, from being and nothingness to creatio ex nihilo, there is much ado about nothing at the heart of things. Recent exciting discoveries in astronomy are shown to shed new light on the nature of the vacuum and its dramatic effect upon the explanation of the Universe. This remarkable book ranges over every nook and cranny of nothingness to reveal how the human mind has had to make something of nothing in every field of human enquiry. This book will serve as a tactical "bible" tailored to the military Special Operations, intelligence and paramilitary/law-enforcement communities and other interested parties - with the intention of breaking the invent-and-forget/reinventing-the-wheel cycle with an aim to (1) increase the effectiveness and lethality of SpecOps personnel and units, while (2) saving the lives of SpecOps personnel engaged in high-risk operations. Wolcott describes numerous historical examples of special reconnaissance (SR) operations, with some emphasis on lessons-learned/Tactics, Techniques, and Procedures gained from the legendary Military Assistance Command Vietnam - Studies and Observations Group (MACV-SOG) SR operations conducted during the Vietnam-era, including operational accounts and analyses of specific missions. Few of these TTPs and lessons-learned have been archived or collated into a usable form for SpecOps personnel or units; this book is intended to preserve and embed this valuable and volatile compilation of tradecraft, that has been obtained at such cost in lives. Wolcott covers the gamut of specialized SR topics ranging from operational planning and preparation, through execution, logistics and command and control - all in substantial

trade-craft detail. This volume contains the accepted papers presented during the International Conference on Research and Education in Robotics - EUROBOT Conference 2009, held in La Ferté-Bernard, France, May 21-23, 2009. Today, robots are indispensable tools for flexible, automated manufacturing in many areas of industry as well as for the execution of sophisticated or dangerous tasks in the nuclear industry, in medicine and in space technology, and last but not least, they are being increasingly used in everyday life. To further encourage research in this area, the EUROBOT Conferences have been set up. They aim to gather researchers and developers from academic fields and industries worldwide to explore the state of the art. This conference is -

accompanied by the EUROBOT Contest Finals, an international amateur robotics contest open to teams of young people. During the finals in 2009, teams from 25 countries came together not only to compete, but also to exchange knowledge and ideas and to learn from each other. In addition to the paper and poster presentations, there were two invited talks: - Raja Chatila, Director of the LAAS - CNRS, Toulouse, France whose talk was about "Cognitive Robots" - Veronique Raoul, EUROBOT Association, France whose talk was about "EUROBOT" Organizing a conference is a task that requires the collaboration of many people. We personally would like to warmly thank all members of the EUROBOT Conference 2009 program committee; without their help and dedication it would not have been possible to produce these proceedings.
